HOW IT WORKS

A platform for doctors and patients, from surgery preparation to recovery.

Polaris
before surgery

The Compass
day by day

The Helm
for the surgeon

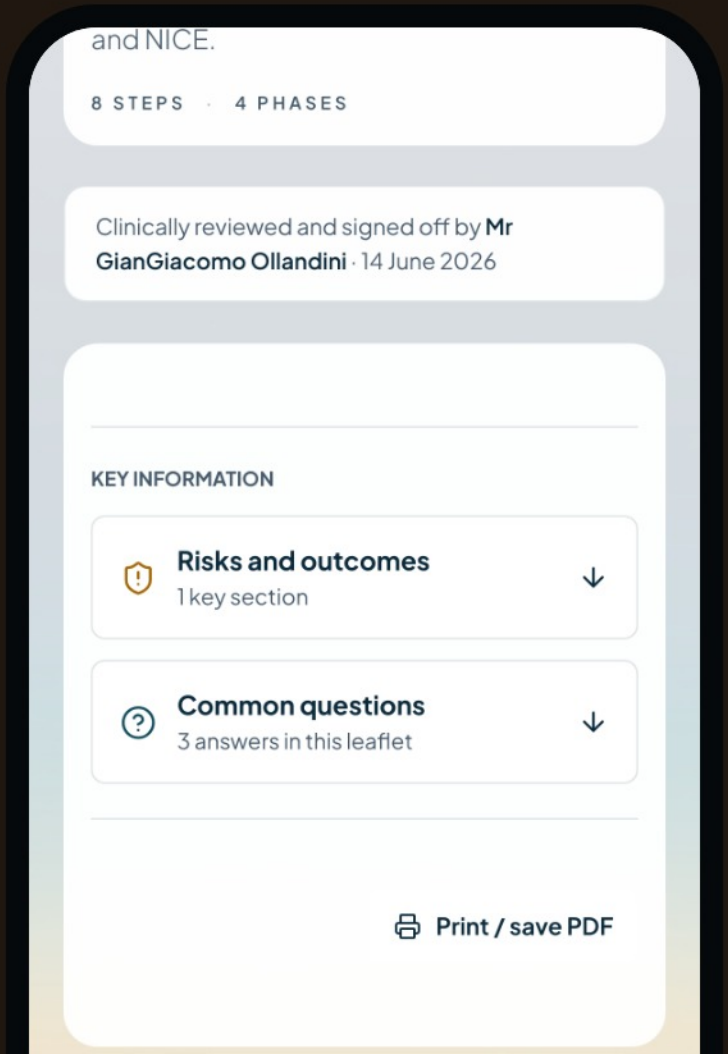

→

Doctors start from their own material or can use a clever generative tool to prepare the draft.

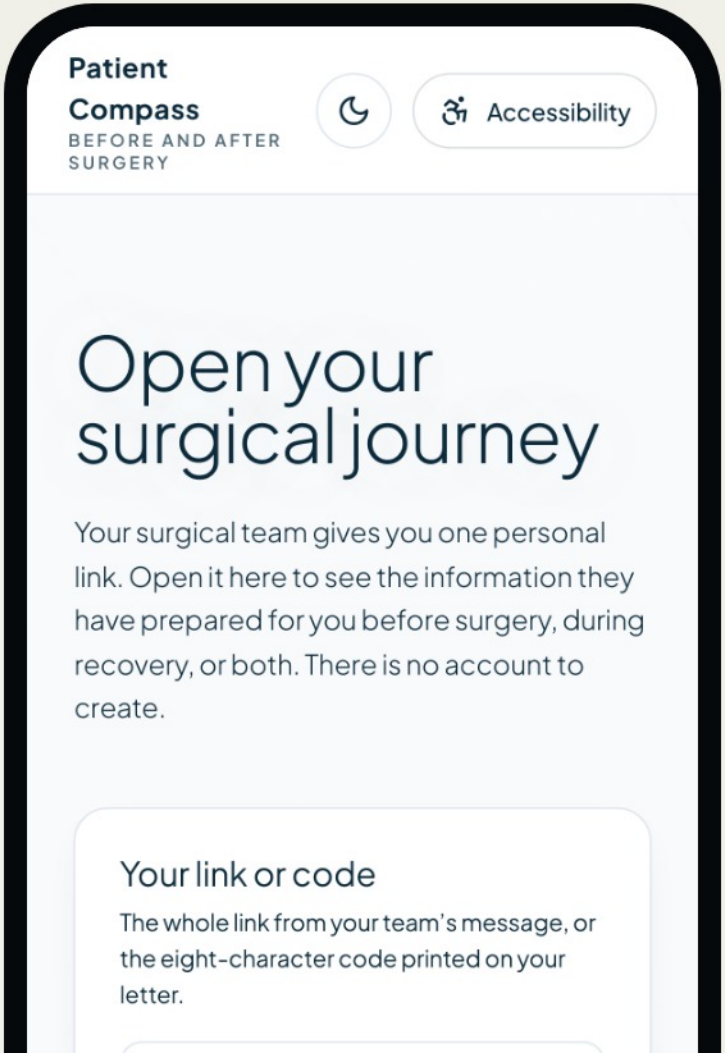

Demonstration data.

They read it, they approve it and sign it.

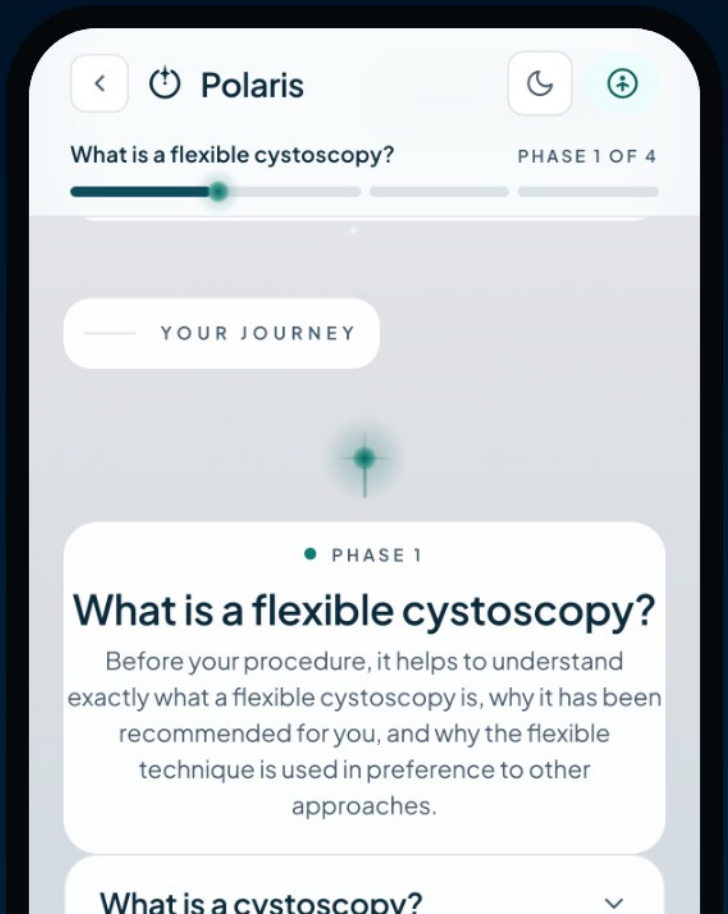

Patients get one link on their phone.

No account. No login.

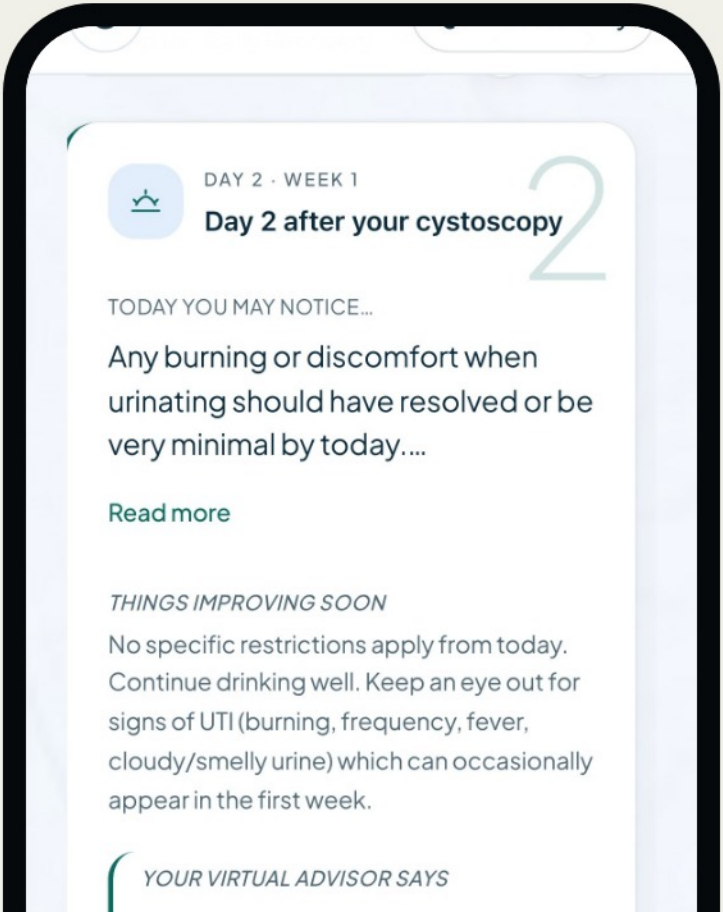

POLARIS · BEFORE SURGERY

Polaris takes them through it, one phase at a time, in plain words, or read aloud.

THE COMPASS · AFTER SURGERY

The Compass shows what each day usually brings, and what warrants contacting their team.

THE HELM

Doctors stay in control.

Every version needs a signature, every signed release is archived, and updates come back to them.
